

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

of treatment found in the two preceding sections. The orders treated in their entirety are the Ardeiformes, Phœnicopteriformes and Anseriformes, while the first few pages are taken up with the last of the text on the Charadriiformes. The account of the habits of the Steamer Duck (*Tachyeres cinereus*), compiled from numerous sources, and the plate of three progressive stages of the downy young of the same peculiar species are of particular interest.

Owing to the death of both of the authors of the third and preceding portions of this report the preparation of the remaining installments has been placed in the hands of Mr. Witmer Stone, who also read the proof-sheets of the present section, although as presented it is entirely the work of the deceased authors.— J. A. G. R.

**Kuser's Birds of Somerset Hills.**<sup>1</sup>—In this dainty little volume Mr. Kuser has presented the results of his studies of the birds of Somerset County, northern New Jersey. The species are arranged according to their haunts, and their habits and plumages briefly described, while there are colored illustrations from paintings by Mr. C. A. Reed. There are special chapters on The Increase and Decrease of Birds, My Best Day's Record — 64 species, Calendar of Bird Migration in Somerset Hills, Terms used to denote the Abundance or Rarity of Birds, List of Birds Observed in the Somerset Hills, and The Horrors of the Taking of Aigrettes. The book is tastefully gotten up and beautifully printed and the subject matter cannot fail to interest its readers in birds and their protection.— W. S.

**Murphy on Birds of Prospect Park, Brooklyn.**<sup>2</sup>—Mr. Murphy contributes a nominal list of 147 species of birds observed in Prospect Park, Brooklyn, by members of the 'Bird Lovers' Club of Brooklyn' during the past six years. Twelve of these have not been recorded from Central Park, New York, while eighteen species seen by observers in the latter locality have not been found in Prospect Park.

The list will be interesting to those engaged in observing birds in other public parks and reservations in or about our large cities.— W. S.

**Bragg's Supplement to the Birds of South Carolina.**<sup>3</sup>—This list is intended as supplementary to Mr. Arthur T. Wayne's 'Birds of South Carolina,' published by the Museum in 1910. It contains notes on ninety-six species, giving additional records, exceptional dates of occurrence and
